# Prediction of Deals

# SHARK TANK

# Overview

# Predictive Research Question

Do industry, valuation, number of entrepreneurs, equity exchange, and amount of money asked for lead to a deal in Shark Tank?

**Provides valuable insights for:**

---

Entrepreneurs looking to pitch their ideas on the show

Help investors make more informed decisions about which companies to invest in.

---

# Potential Impacts

## why our findings matter

Determine which industries are **most likely to succeed** on Shark Tank, helping entrepreneurs focus their efforts

Help entrepreneurs prepare better pitches by **highlighting the critical elements** that investors look for

Provide a benchmark for comparing different companies and **predicting their success** in the market, helping investors **make more informed decisions** about which companies to invest in

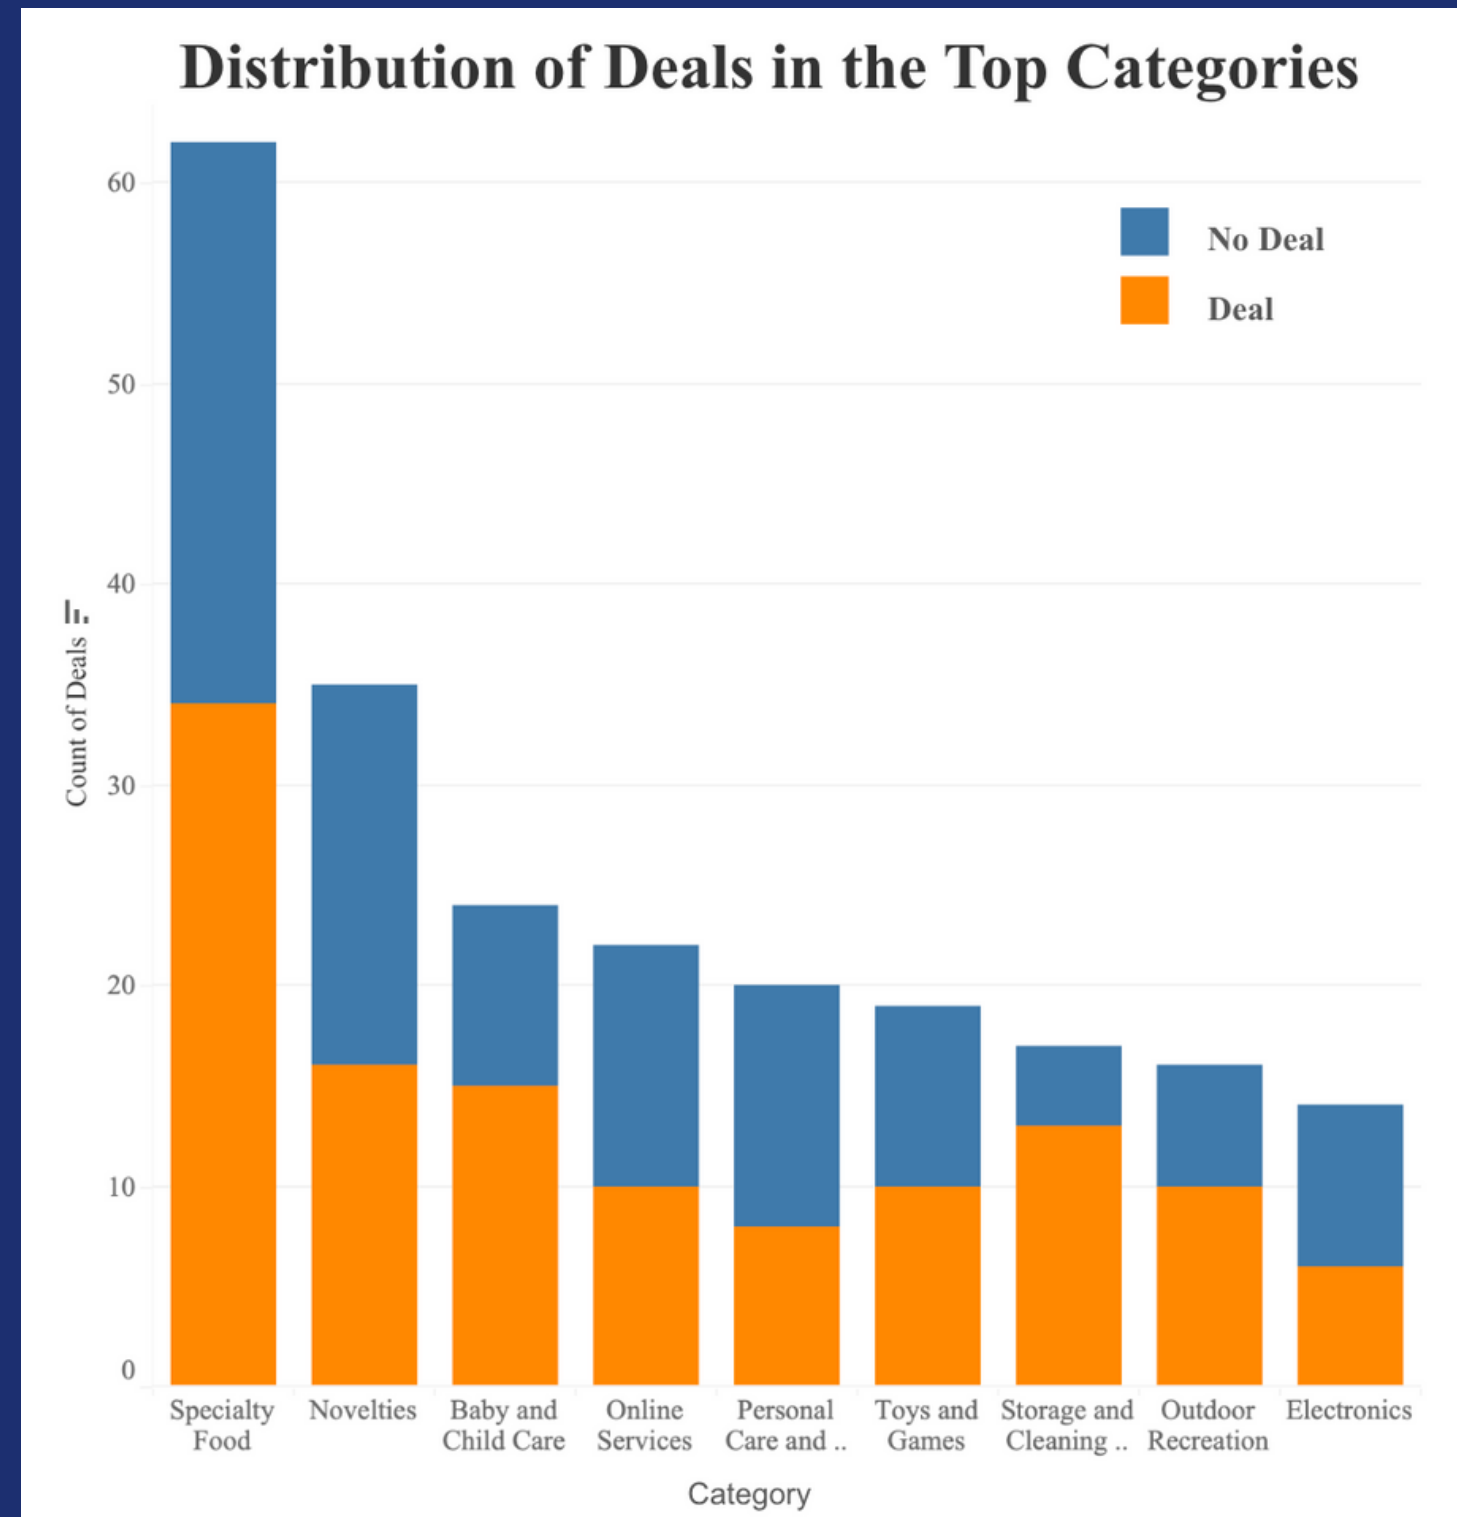

# Methodology

# The Data

Data was obtained in Kaggle from Urlik Thyge Pederson

## Core Descriptors

- Title, Description, and Category of Idea
- Show Season and Episode Number
- Money Asked for, % Exchange for the Stake, and Valuation
- Entrepreneur(s) and Sharks
- Deal or No Deal

# Data Insights

Heatmap correlation between all variables of interest

Pitches in Categories

- **Mean:** 9.17, Median: 5.5, Range: 62
- **Outliers:** Specialty Food, Novelties, Child Care, Games, Personal Care, Online Services

# Algorithms and Models

What factors increase the likelihood of a deal?

Is there a relationship between details about the company and a deal being struck?

- Company valuation
- Whether there are multiple entrepreneurs
- Company industry

Can we predict whether a deal is made using attributes such as Industry, valuation, % stake, multiple entrepreneurs, and amount asked for?

# Findings

# Is there a relationship between details about the company and a deal being struck?

---

We found:

- **No significant relationship** between industry and a deal being struck
  - Adj. r-squared: **50.5%**
- **No significant relationship** between company valuation and a deal being struck
  - R-squared: **10.2%**
- **No significant relationship** between having multiple entrepreneurs and a deal being struck
  - R-squared: **18.7%**

# What factors increase the likelihood of a deal?

---

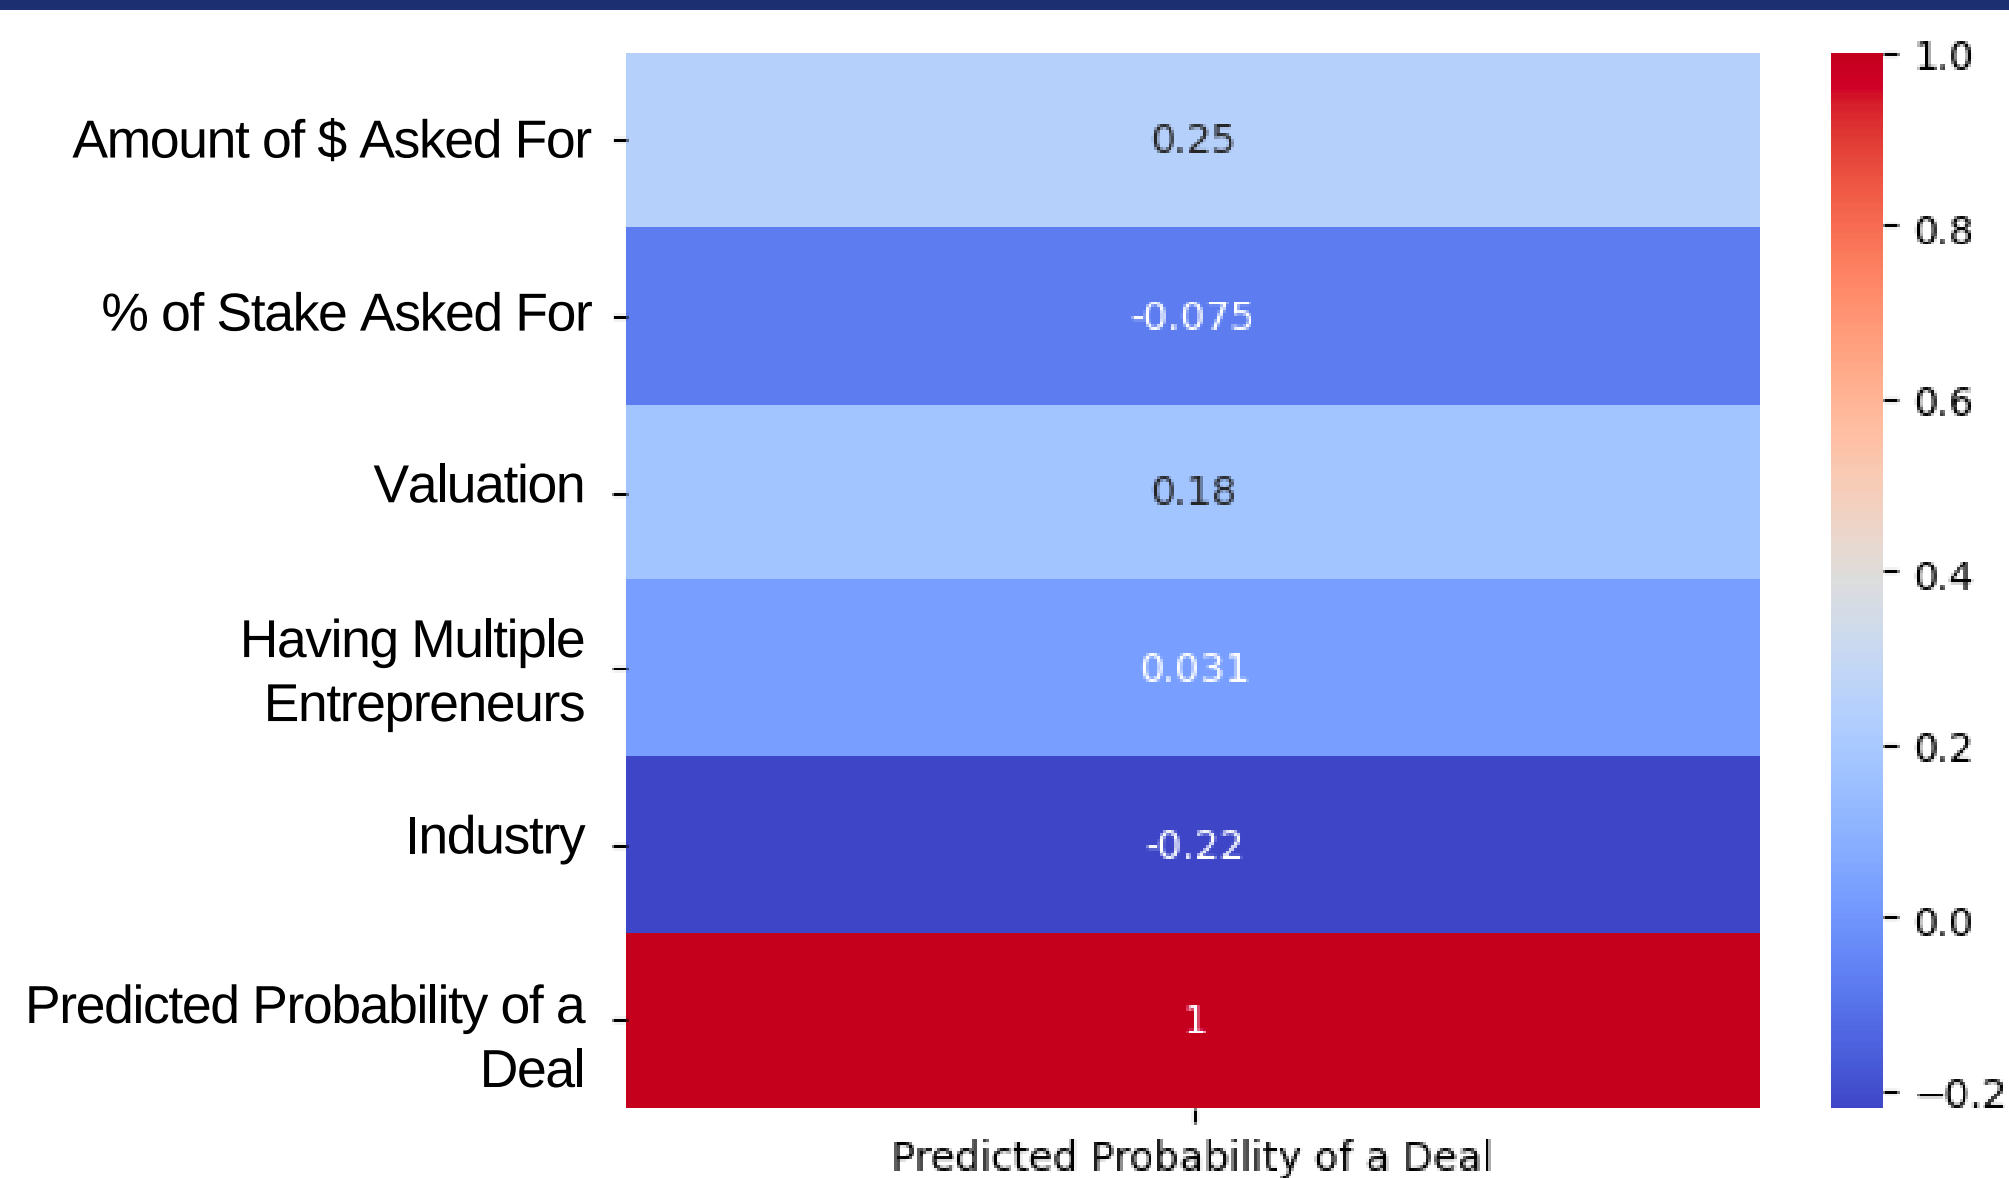

We found:

- How much money the company asked for
- The % of stake the company asked for
- The company's valuation
- Whether there were multiple entrepreneurs
- The company's industry

To have **no significant effect** on the likelihood of a deal

**Accuracy score: 48%**

# What factors are important predictors of a deal?

- The company's **valuation** and the **amount of money it is requesting** are more important predictors of a deal than the company's industry.
  - This model had a **61%** accuracy score

# Recommendations and Conclusion

# Additional Insights

- Having more data helps **improve the accuracy** of the models
- Upward trend -> better predictions possible

# Recommendations and Conclusions

## recap of relationships and model scores

- weak accuracy scores
- pessimistic models
- **valuation** and **amount asked for** more accurate predictors

## need for further research

- expand dataset to get **better understanding**
- gather more information for **improved predictions**

## benefits and applications

- help weed out entrepreneurs
- help **improve entrepreneurs' chances** of securing a deal
- serve as **standard for evaluation**
